Description

The NT 361 eco wet and dry vacuum is a particularly user-friendly unit which is ideal for universal applications, e.g. in the trades, contract cleaning and car dealers. One very practical feature of the new vac is the flat pleated filter which offers three essential benefits: The user can alternate between wet and dry pickup without any interruption because the filter element is always above the fluid level. Access to the filter is quick and simple because it is not necessary to remove the motor head first. Flat pleated filter increases useful capacity of container since it does not project downwards. Power Filter Clean System, filter cleaning via remote control ensures constant suction power. The electronic level monitor automatically switches off the fan motor when the maximum fluid level is reached. Unit has two large diameter wheels at the rear and two castors at the front for high stability and manoeuvrability, it is also light enough to be carried without difficulty. A large ON/OFF switch as well as holders for storing the cable and accessories on the unit offer additional user convenience.

Application

Universal applications in all the crafts and trades, e.g. work-working industry, joiner's workshop, carpentry, window and door factory, contract cleaners and parquet layer

Features & Benefits

Accessory for specific target groups Versatile applicable All the accessories can be stored on the unit. Bypass suction fan installed in sound-proofing hood(64 dB (A)) High suction power, trouble-free wet and dry pickup, low operating noise. Easily removed fan motor head with integrated on-/ off-switch, power cable holder and baffle plate Waste container easily accessible, optimum protection for paper filter bag, convenient handling and operation ECO flat pleated filter tested according to the dust class M Large filter area (0.62 m²) with the six benefits of the ECO-flat pleated filter Electronic liquid level monitoring during wet pickup Fan switches off automatically when maximum liquid level is reached. PFC (patent) Power Filter Clean Minimum filter wear, filter cleaning is done by remote control and ensures continuous high suction power
